

Zero Effort Authentication for Conversational Interfaces

- SafeChat™ is the world's first frictionless, continuous biometric authentication solution specifically designed for chatbots, virtual assistants, and messengers in mobile and web applications
- SafeChat™ uniquely combines multiple biometric modalities for highly secure multi-factor authentication but with a comfortable, natural interface that does not require logins and passwords

Simply use your application normally. SafeChat™ authenticates in the background using all available biometrics. Apply dynamic thresholding and step-up authentication for higher risk transactions.

Equal Error Rate as low as 0.1% for fused modalities using Convolutional Neural Networks

Voice anti-spoofing detects synthesized and recorded speech fraud attacks

Facial biometrics with facial liveness that does not require eye blinks or head movements

Keystroke dynamics for mobile or web

SDKs available for iOS, Android for mobile and Linux and Windows for servers

About ID R&D

ID R&D, Inc, focuses on research in the science of biometrics with a goal of producing the most advanced and highest performing biometric solutions. Learn more about the company's award-winning products and technology at www.idrnd.net
